

ACCUTECH
Films, Inc.

Engineer. Create. Perform.

MISSION STATEMENT

"The mission of Accutech Films, Inc. is to be a recognized leader in providing blown film plastic solutions that give our business partners competitive advantage and consumer value, assisting and enabling them to attain their desired business objectives and financial results."

Flexible Packaging Solutions

Accutech Films, Inc. began operations in 1997 with the desire to be the recognized leader in the blown film industry. Our dynamic and growing company serves all of North America from our headquarters in Coldwater, Ohio.

We specialize in a variety of flexible packaging products for food, beverage, automotive, agricultural, advertising, medical and industrial applications. As a solution-driven company, Accutech Films excels at creating and manufacturing a diversified line of converter-grade film products for operations that require tight tolerance and excellent roll wind. Our reputation as a high quality producer of bags, sheeting and tubing at competitive prices has helped our business partners attain their objectives through improved margins and superior products.

We understand that manufacturing top-grade products is just one of the reasons why customers choose Accutech Films. Our reputation has been built on satisfying customers by meeting custom specifications, tight deadlines and strict

shipping requirements. From product engineering to warehousing, our approach to creating blown film solutions has set us apart as an industry innovator.

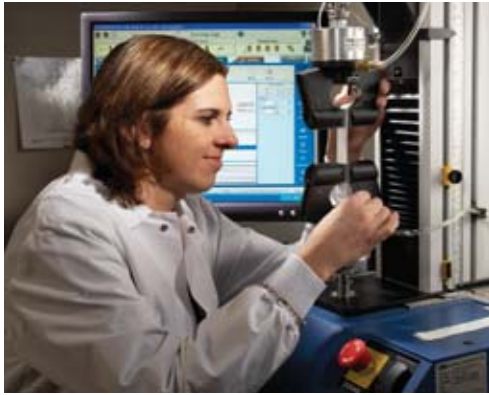

For customers large and small, for standard or custom products, and for a variety of commercial and industrial applications – the right choice is Accutech Films.

Engineer.

In our state-of-the-art laboratory, Accutech Films is able to statistically analyze products to determine their individual components and ranges. Through structured testing protocols, we can obtain information about the product such as physical strength, oxygen transmission rate, moisture vapor transmission rate and other traits. This allows Accutech Films to develop formulas that will result in equivalent or better products at a greater value.

Our testing methodologies, honed through years of real world experience, are second to none and provide customers with the confidence they need in product results.

Create.

Using only the finest resins and additives from the most reputable suppliers, Accutech Films creates coextruded and custom-blended products for a wide variety of applications.

Computerized technology and cutting edge machinery produce polyethylene with speed, accuracy and integrity. With quality as a primary objective, Accutech Films operates multiple extrusion lines 24 hours a day. Skilled associates receive continual training in an atmosphere where innovation flourishes and perfection is seen as a realistic goal.

Thorough, in-process inspections occur frequently so that products meet the highest standards of consistency and accuracy. Accutech has developed quality control standards to make certain that products meet specifications.

Perform.

As a service-oriented company, Accutech Films does its best to learn about our customers' requirements – whether regulatory, usage or shipping. We have built our business on satisfying the needs of our customers. Our involvement starts at the beginning where we learn about specifications, and continues on through quoting, testing, manufacturing, product packaging and meeting deadlines.

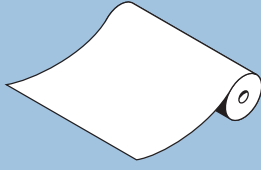

There's no secret to a job well done. At Accutech Films, we believe in getting the details right and we don't believe there's such a thing as a small detail. We pride ourselves on excellent customer service in terms of quick quotes, fast response times and speedy delivery.

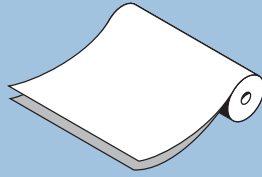

For us, success is measured by two benchmarks: How well we perform and how well our products perform.
